DAFTAR TABEL

Tabel Halaman

1. Produksi gas bumi nasional 2004 - 2011 .......................................................... 6
2. Komponen penyusun biogas (Setiawan, 1996) ...................................................... 8
3. Kandungan kimia kulit pisang.............................................................................. 22
4. Sebaran luas perkebunan kelapa Di Indonesia .................................................... 25
5. Perbandingan komposisi perlakuan dan nilai C/N rasio yang diharapkan ...... 30
6. C/N Rasio masing-masing bahan......................................................................... 35
7. C/N Rasio masing-masing perbandingan............................................................. 35
8. Karakteristik rata-rata slurry biogas awal dan akhir ......................................... 37
9. Hasil analisis sidik ragam total produksi biogas ................................................ 44
10. Hasil Uji Duncan total produksi biogas .............................................................. 44
11. Hasil analisis sidik ragam produktivitas biogas.................................................. 47
12. Hasil Uji Duncan produktivitas biogas ................................................................. 47

Lampiran

13. Produksi gas kumulatif ulangan ke-1............................................................... 64
14. Produksi gas harian ulangan ke-1..................................................................... 65
15. Produksi gas kumulatif ulangan ke-2............................................................... 66
16. Produksi gas harian ulangan ke-2..................................................................... 67
17. Produksi gas kumulatif ulangan ke-3............................................................... 68
18. Produksi gas harian ulangan ke-3..................................................................... 69
19. Rata-rata laju produksi biogas harian (ml)......................................................... 70
20. C/N Rasio setiap bahan ..................................................................................... 71
21. C/N Rasio setiap perbandingan ....................................................................... 71
22. pH Substrat awal-akhir setiap perlakuan......................................................... 71
23. Produktivitas setiap perlakuan ................................................................. 72
24. Hasil pengukuran total solids dan total volatile solids awal .................... 72
25. Hasil pengukuran total solids dan total volatile solids akhir ................... 73
26. Kadar air, TS dan TVS awal-akhir ............................................................ 73
27. Suhu lingkungan dan suhu reaktor harian setiap perlakuan .................... 74
