This research aims to compare the level of aggressiveness before and after the implementation of PSAK 73 in Indonesia, with a special focus on service companies in the retail trade & financing sub-sector for the 2017-2022 period. This research is a type of quantitative research using secondary data from the Indonesian Stock Exchange and the official websites of each company. The sampling method used purposive sampling and obtained 18 companies with an observation period of 6 years so that the total research observation data was 108 data. Data analysis techniques include descriptive statistical analysis, normality testing, and hypothesis testing. This test was tested using the Microsoft Excel application and the Statistical Package for the Social Sciences (SPSS) software version 27. Based on the research results, it was found that the implementation of PSAK 73 influenced the company's tax aggressiveness behavior, so that companies paid more attention to tax aspects in their business decisions.
