## **ABSTRACT**

Sustainable development will create economic growth, which in turn resulted in changes in the economic structure. Structural transformation include of the change processes structure economy from traditional sector to the modern sector, as case in the happened of North Lampung regency. Change structure or transformation economy can be definition the changes of labor recruitment and the contribution regional gross domestic product (PDRB) in region. Purpose of the research to analyze structure economic in region during the year 2000 – 2013 and shift in the economic sector, especially in the labor absorption and the growth and contributing to the preparation of PDRB output in North Lampung. Analyze data to use in data secondary from 2000 to 2013. This study used shift-share analysis, LQ (Location Quotient), and typology Klassen. The result of shift-share analysis of PDRB and employment show the industrial sector is a rapidly growing sector Rp.2.988,66 Milyar and 200.000 employments with the highest competitive level Cij, Rp.861,16 Milyar and 190.439 employments. LQ analysis results showed that in 2000 the sector base is agriculture (1,08) and trade (1,00), while in 2013 the sector which became the base is industrial (1,18), LGA (1,68), trade (1,15) and services (1,17) sectors. Klassen typology analysis results show that the industrial sector, LGA sector, trade and services sector is a sector that is advanced and fast growing. From these results it can be seen that there has been a change or transformation of the economic structure in North Lampung regency of the primary sector to the secondary sector in the years 2000-2013.
