The problem in this study is the low learning outcomes of the 4th grade students in SD Negeri 2 Metro Selatan. This study aims to determine the effect of the application of the discovery learning model assisted by pop up book media on the learning outcomes of the 4th grade students of Elementary School. The data collection technique used is test. The research method used Quasi Experimental Design with a Nonequivalent Control Group Design. Population and samples used in this study were 49 students. The sampling technique used was purposive sampling. Data analysis was done using a simple regression test. The results showed that there was a significant effect on the application of the discovery learning model assisted by pop up book media on the learning outcomes of IPAS students in class IV at SD Negeri 2 Metro Selatan.
