Penelitian ini menggunakan jenis penelitian eksperimen dengan pendekatan kuantitatif. Metode penelitian yang digunakan yaitu pre-eksperimental dengan desain penelitian *one group pretest-posttest design*. Teknik pengambilan sampel pada penelitian ini yaitu menggunakan total sampling dengan jumlah sampel sebanyak 20 anak. Teknik pengumpulan data menggunakan teknik observasi berupa ceklist. Teknik analisis uji hipotesis menggunakan uji *wilcoxon*. Hasil penelitian menunjukkan bahwa penggunaan *Rubber band game* berpengaruh terhadap perilaku prososial anak. Hal ini dibuktikan dengan hasil perhitungan uji *wilcoxon* diperoleh nilai  $Asm.sig\ 0,000 < 0,05$ . Perilaku prososial anak dapat dilihat berdasarkan dimensi menolong, kerja sama, berbagi, dan menghibur.

This research aims to determine the effect of the Rubber band game on the prosocial behavior of children aged 5–6 years. The research employed an experimental method with a quantitative approach. The design used was a pre-experimental one-group pretest–posttest design. The sampling technique applied was total sampling, involving 20 children as the sample. Data were collected using observation techniques in the form of checklists. The hypothesis was tested using the Wilcoxon test. The results showed that the use of the Rubber band game had a significant effect on children’s prosocial behavior. This was evidenced by the Wilcoxon test results, which obtained an Asm. Sig value of  $0.000 < 0.05$ . The children’s prosocial behavior improvements were observed across the dimensions of helping, cooperation, sharing, and comforting.
