Smoking behavior is one of the activity that inhale tobacco which making an addiction for the smoker. The intensity of smoking can be influenced by age, gender, education, and income. To decrease the smoking intensity, all we need is a strong will to stop that habit and social support, likes from the family. Wife support is also needed as the effort in order that the husband can stop their habit. The aim of this research is to determine the relationship of the wife's attitude about smoking and the family support for smoking intensity households in RT 1, RT 2, RT 4, RT 6, RT 7, RT 11, RT 12, and RT 13 Kelurahan Labuhan Ratu Raya Kecamatan Labuhan Ratu Bandar Lampung since 2012.

The method in this research is cross sectional with proportional random sampling techniques and sample number 189 respondents. This research was done by interviewing and questionnaires filling. This research used cross sectional method with proportional random sampling technic and needed 189 respondents.

The results of research show that there are 52,9 % respondents who have a good attitude, 57,7 % respondents who have family support and the most smoking intensity is moderate (9-10 cigarettes per day). There is no significant relationship between wife's attitudes about smoking and the intensity of smoking ($p\text{-value}=0.0779$, $\alpha > 0.05$) and there is a significant relationship between family support and smoking intensity ($p\text{-value}=0.027$, $\alpha < 0.05$).

Keywords : family support, smoking intensity, wife's attitude
